

DESIGN AREA

The entire template is the print area for your design. You cannot adjust your artwork once uploaded into the app, so use this template to help with size and positioning of your artwork.

The printing process for this product will be done using UV printing. This allows for crisp/vibrant full color prints, while allowing for transparency on the product itself. Since the product is seethrough, the UV printing process makes for a unique and professional looking finished product.

We strongly recommend uploading artwork with a transparent background that utilizes positive and negative space. You can certainly upload a PNG with a background, but solid backgrounds tend to look more like a sticker or label on the finished product.

Unlike sublimated products, the absense of color in your design will not result in a white background. If you want a white background, you need to apply that prior to uploading your design.

Make sure to hide/remove the template layer prior to saving your design.
